4. Troubleshooting

Device not connecting to Wi-Fi

Ensure your router is broadcasting on 2.4GHz or 5GHz band. The NT-S100 supports both bands. If connection fails, try resetting the device by holding the Action button for 10 seconds until the LED ring flashes white.

Poor audio quality

Check that the speaker is not placed near metal objects or other wireless devices. Ensure the audio source bitrate is at least 128kbps. For best results, use FLAC or WAV files for local playback.
